Portfolio: jeremy-lin.vercel.app

Education

University of British Columbia

Sept 2024 - May 2028 (Expected)

B.Sc. Major in Computer Science (GPA: 3.8, Dean's List)

Projects

[AirBnb Rating Predictor](#) | Python, Scikit-Learn, Pandas

Feb 2026 - Mar 2026

CPSC 330 - Applied Machine Learning

- Engineered and compared multiple **regression models** (Random Forest, Ridge, Linear Regression) on 49,000+ NYC Airbnb listings to predict monthly review rates, achieving an **RMSE of 0.98**.
- Reduced model error by **20%** and outperformed baseline model by **36%** through feature engineering and hyperparameter tuning via cross-validation, improving generalization on unseen listings.
- Preprocessed and cleaned a **49,000-row dataset** by handling missing values, encoding categorical features, and normalizing skewed distributions, reducing data noise and improving pipeline reliability.
- Identified the **top 3 predictors** of listing review frequency (neighbourhood, room type, price) through feature importance analysis, providing actionable insights for hosts.

[OctoPod](#) | React, Gemini API

Nov 2025 - Dec 2025

HackCamp 2025

- Built a responsive React front-end consuming the Gemini **REST API** to deliver real-time AI tutoring to users.
- Created **complex system prompts and constraints** for the API, improving response relevance by **20%** and eliminating off-topic model hallucinations.
- Optimized API performance by **50%** by implementing **asynchronous request handling** and **streamed responses**, significantly reducing **Time to First Token (TTFT)**.

[Personal Website](#) | React, Tailwind CSS

Dec 2025 - Feb 2026

Independent Project

- Designed a personal portfolio using React, Framer Motion, and GSAP, featuring animated project showcases and a responsive layout.

[Sudoku](#) | Java, JSON, Java Swing, JUnit5

Jan 2025 - May 2025

CPSC 210 - Software Construction

- Engineered a Sudoku engine generating randomized puzzles across user-defined difficulty tiers
- Implemented data persistence via JsonReader and JsonWriter, enabling seamless save/resume functionality and reducing session restart rate.
- Achieved **90% test coverage** across core game logic using **JUnit 5**, validating puzzle generation, state management, and edge case handling.

Volunteer and Work Experience

Assistant Badminton Coach | Edmonds Community Center

Sept 2017 - Current

- Completed over **300 volunteer hours** as of September 1, 2025.
- Mentored students individually and in groups, improving the total personal training time by **30%**.

Teaching Assistant (Java) | Burnaby South Secondary

Sept 2023 - Jun 2024

- **Mentored 30+ students** in mastering Java fundamentals regarding Object-Oriented Programming (OOP) principles.
- Graded handwritten code for syntax and logical integrity, providing written feedback that increased scores by **20%**.

Technical Skills

Programming Languages: Java, JavaScript, Python, C/C++, Assembly, HTML/CSS, R

Frameworks: React, TailwindCSS, NumPy, Pandas, Next.js, Node.js

Libraries/Other: NumPy, Scikit-learn, Pandas, Java Swing, JSON, Framer Motion, GSAP, Figma, Git, JUnit5, SQLx
